

React Frontend Developer

Experience: 1–2 years

Location: Pune, India (on-site)

Company: Foto Owl AI — AI-powered photography, sports media, and visual commerce platform

About the Role

We're looking for a React Frontend Developer to join our product engineering team. You'll build and ship user-facing features across our web products — working closely with design and backend engineers to turn product ideas into fast, polished interfaces used by real customers.

What You'll Do

- Build and maintain UI features in React (functional components, hooks)
- Translate designs (Figma or similar) into responsive, accessible interfaces
- Integrate with REST/GraphQL APIs and handle real-world data/loading/error states
- Write clean, typed, testable code (TypeScript preferred)
- Debug and fix issues across browsers and devices
- Collaborate in code reviews and contribute to improving frontend practices
- Work with modern tooling (Vite/Webpack, npm/yarn/pnpm, Git)

What We're Looking For

- 1–2 years of professional experience building production React applications
- Solid fundamentals in JavaScript/TypeScript, HTML, and CSS
- Comfort with React hooks, component composition, and state management (Context, Redux, Zustand, or similar)
- Experience consuming REST APIs and handling async data flows
- Familiarity with Git and collaborative development workflows
- Ability to read and reason about existing code, not just write new code
- Good communication and a habit of asking questions when requirements are unclear

Good to Have

- Experience with React Native, Next.js, or Tailwind CSS
- Exposure to testing tools (Jest, React Testing Library, Playwright/Cypress)
- Familiarity with CI/CD pipelines
- Interest in using AI coding tools (Copilot, Cursor, Claude Code, etc.) as part of the workflow
- Basic understanding of performance and accessibility best practices

What You'll Get

- Direct ownership of features from design to production
- A small, fast-moving team where your work ships quickly and visibly
- Exposure to the full product stack, not just isolated tickets
- Room to grow into a senior engineering role as the team scales
